| Key Vocabulary                          |   | Key Knowledge  |   | Light and materials                     |
| WORD                                    | DEFINITION  |  |   |   |
| Beam                                    | A ray of light.   | • We need light to<br>see things. Light tr<br>straight line.   |   | TRANSPARENT<br>ALL light passes through |
| Mirror                                  | A surface, typically of glass coated with a metal which reflects a clear image. | • When light hits<br>reflected (bounces  | Image: Constraint of the set of the |   |
| Opaque                                  | Not able to be seen through.  | <ul> <li>If the reflected light hits our eyes, we can see the object.<br/>Some surfaces and materials reflect light well. Other<br/>materials do not reflect light well.</li> <li>Reflective surfaces and materials can be very useful.</li> </ul> |   |   |
| reflect                                 | The process that describes light bouncing off a surface.                        |  |   |   |
| Shadow                                  | A dark image that is formed when an object blocks the light.                    | <ul> <li>Remember the Sun can be dangerous.</li> <li>Mirrors reflect light very well, so they create</li> </ul>  |   |   |
| Light source                            | An object from which light is made. E.g. sun, torch, flame.                     | <ul> <li>image.</li> <li>An image in a mirror appears to be reversed.</li> </ul>   |   |   |
| Transparent                             | Able to be seen through.  | if you look in a mirror and raise your right ha<br>image appears to raise its left hand.   |   |   |
| Translucent                             | Some light can pass through the material.                                       | <ul> <li>A shadow is caused when light is blocked by an opaque<br/>object.</li> </ul>  |   |   |
| Vitamin D                               | A vitamin that come from sunlight or food and important for bone strength.      | <ul> <li>A shadow is larger when an object is closer to the light<br/>source. This is because it blocks more of the light.</li> </ul>  |   | BACKPACK                                |
| Shadows                                 |   | Key Scientist/inventor   |   | Reflection                              |
| Source Opaque object<br>umbra<br>screen |   | <b>Thomas Edison</b> was a very careful worker,<br>who is now known as one of the most<br>important inventors in history.  | Light from the hits the object  | _                                       |
|   |   | In 1879, Edison created a lightbulb that would<br>stay lit using electricity<br>for 13 ½ hours!  |   |   |
